

SIGHTLINE · OOH MEDIA INTELLIGENCE REPORT

Fluent — OOH Campaign Media Brief

Making Accessibility Accessible.

PREPARED FOR
Fluent Marketing Team

PREPARED BY
Sightline Intelligence

CAMPAIGN OBJECTIVE
Waitlist Growth + Brand Awareness

CAMPAIGN PERIOD
1 July – 30 September 2026

Media Assets

The following placements have been identified and evaluated for this campaign. Each asset has been assessed for visibility, format suitability, and audience alignment.

1. Fluent — Hero Ad Creative

FORMAT	LOCATION	DIMENSIONS	WEEKLY REACH
Digital Billboard / Large Format	Default Creative Asset	9.6m × 3.2m	0
VISIBILITY SCORE			
88/100			

SECTION A

Media Feedback

AI-powered scene analysis from agent captures. Each page documents one agent observation: what was seen, how the creative performed in context, and what the simulation recommends.

SECTION A · CAPTURE 1 OF 2

Orchard MRT Digital Billboard

Observed by Pedestrian 007 · 00:55

Agent capture image not available

SCENE DESCRIPTION

High-density pedestrian corridor at Orchard MRT exit B. Mixed demographic of office workers, students, and tourists. Ambient light is moderate; competing signage from retail tenants creates visual noise at eye level. The digital billboard occupies the upper zone above the taxi stand, with an unobstructed sightline of approximately 35 metres.

AD DESCRIPTION

Electric yellow full-bleed background with the Fluent wordmark and icon top-left in near-black. Headline reads "Making Accessibility Accessible" in bold geometric sans-serif across two lines. Right half features a 3D render of the Fluent desktop app on a dark monitor with yellow UI accents. Hardware devices (sip-and-puff puck, LED haptic tile) are visible in the lower-right foreground. CTA strip at the bottom reads "Join the Waitlist at getfluent.tech" in a dark rounded pill.

FIRST IMPRESSION

The electric yellow background creates an immediate and powerful contrast against the grey station environment. The creative is unmistakably visible from the full 35-metre approach distance. The headline is legible in under 2 seconds.

LIKELY ATTENTION

Very high for stationary pedestrians in the taxi queue (avg dwell ~21s). The yellow-black contrast is among the highest-performing colour combinations for peripheral vision capture. The 3D hardware render adds a curiosity hook that extends gaze duration beyond the initial colour trigger.

LIKELY CONFUSION

The product category — assistive AI — is not immediately obvious to a general audience. Pedestrians unfamiliar with accessibility technology may not self-identify as the target user. The URL in the CTA is readable but requires a deliberate pause to memorise.

RECOMMENDATION

The creative is visually excellent. To improve conversion, add a short descriptor line beneath the headline — e.g. "AI that lets anyone control their computer by voice, breath, or movement" — to bridge the awareness gap for non-specialist audiences. The CTA URL should also appear as a QR code.

SECTION A · CAPTURE 2 OF 2

one-north MRT Station Domination

Observed by Pedestrian 031 · 01:20

Agent capture image not available

SCENE DESCRIPTION

one-north MRT station serves a dense cluster of tech companies, research institutes, and startup offices. Commuter profile skews strongly toward engineers, product managers, and researchers aged 24–40. Dwell time in the station is elevated due to bus interchange connections. The station domination format covers all four platform walls and the fare gate zone.

AD DESCRIPTION

Station domination execution of the Fluent creative system. Yellow panels alternate with near-black panels carrying the feature icons (Sip & Puff, Head Tracking, Voice, Text, Haptics) at large scale. The app UI screenshot is displayed at near life-size on the platform wall facing the train doors.

FIRST IMPRESSION

Total brand immersion. The yellow-black alternation across the station creates a coherent, high-energy environment that is impossible to ignore. The feature icons at large scale communicate product breadth without requiring text.

LIKELY ATTENTION

Extremely high. Station domination format guarantees 100% share of visual space. The tech-savvy commuter profile at one-north is the ideal primary audience for an AI accessibility product. Multiple exposure points across the commute journey reinforce brand recall.

LIKELY CONFUSION

Some commuters may perceive the brand as a general AI assistant rather than an accessibility-specific product. The feature icons are clear to a tech audience but may require context for others.

RECOMMENDATION

This is the highest-value placement in the plan. Prioritise budget here. Consider adding a short testimonial from a real user on one of the black panels to add human credibility to the technology proposition.

SECTION B

Audience Analysis

Demographic and behavioural breakdown of the audience exposed to each placement. Data is derived from pedestrian simulation, foot-traffic modelling, and contextual dwell-time analysis.

Audience Analysis

Urban professionals aged 25–44 dominate the exposure window, with a secondary cluster of retail shoppers. Peak exposure occurs during morning and evening commute hours.

SECTION C

User Interviews

Verbatim transcripts from AI-simulated pedestrian interviews. Each subject encountered the billboard during the simulation and was asked about their recall, attention, and reaction.

SECTION C · INTERVIEW 1 OF 3

Aisha Rahman

Software Engineer · Buona Vista

Age 28

Female

Commute: MRT daily (one-north line)

Saw: one-north MRT Station Domination

89 / 100 · RECALL SCORE

Interview Transcript

INTERVIEWER

Good morning. Did you notice any advertising at one-north MRT station today?

AISHA RAHMAN

The yellow one? Yes, absolutely. You couldn't miss it — the whole station was covered. It was for something called Fluent.

INTERVIEWER

Can you tell me what you understood the product to be?

AISHA RAHMAN

It's an AI that lets people control their computer without using their hands. I saw the icons — voice, head tracking, sip and puff. I work in accessibility tools so I immediately got it. Really interesting product.

INTERVIEWER

Did the advertising make you want to find out more?

AISHA RAHMAN

I already went to the website actually. I saw the URL on the ad and looked it up on my phone on the train. I joined the waitlist.

INTERVIEWER

What was the most memorable part of the creative?

AISHA RAHMAN

The yellow. It's very bold. And the headline — "Making Accessibility Accessible" — is genuinely clever. It says a lot in very few words.

AI ANALYSIS · KEY TAKEAWAY

Aisha demonstrated strong unaided recall and immediately connected the product to a professional use case. Her engineering background meant she understood the multimodal input concept without explanation. She expressed high purchase intent and had already visited the website before the interview.

SECTION C · INTERVIEW 2 OF 3

David Lim

Occupational Therapist · Clementi

Age 52

Male

Commute: Bus + MRT

Saw: Orchard MRT Digital Billboard

71 / 100 · RECALL SCORE

Interview Transcript

INTERVIEWER

Did you notice any outdoor advertising at Orchard MRT this afternoon?

DAVID LIM

There was a very yellow one. I remember thinking it was quite striking. Something about accessibility I think.

INTERVIEWER

What did you understand the product to be?

DAVID LIM

I thought it was maybe a productivity app? Like a voice assistant for work. I didn't fully read it — I was in a hurry.

INTERVIEWER

It's actually an AI that helps people with disabilities control their computer — by voice, breath, head movement, or haptics.

DAVID LIM

Oh, that's very relevant to my work. I'm an occupational therapist. My patients with motor impairments really struggle with standard computers. I would absolutely recommend something like this. Do you have a card or website?

INTERVIEWER

The URL was on the ad — getfluent.tech.

DAVID LIM

I'll look that up today. This is exactly the kind of tool we need. The ad should make the disability angle clearer though — I nearly walked past it.

AI ANALYSIS · KEY TAKEAWAY

David had clear recall of the visual but initially misread the product category as a general productivity app. After prompting, he recognised the accessibility angle and expressed strong professional interest. His OT background makes him a high-value secondary audience — a potential referral channel to patients.

SECTION C · INTERVIEW 3 OF 3

Mei Lin Tan

Polytechnic Student (IT) · Tampines

Age 19

Female

Commute: MRT + Bus

Saw: Orchard MRT Digital Billboard

64 / 100 · RECALL SCORE

Interview Transcript

INTERVIEWER

Hi! We're doing a quick survey. Did you see any interesting ads today?

MEI LIN TAN

There was a really yellow one at the MRT. Fluent? I think that was the name. It had a computer on it.

INTERVIEWER

Do you remember what it was advertising?

MEI LIN TAN

Some kind of app? I wasn't sure. It said accessibility but I wasn't sure what that meant in this context. Like, web accessibility?

INTERVIEWER

It's an AI that lets people with disabilities control their computer using voice, breath, or head movement.

MEI LIN TAN

Oh wow, that's actually really cool. I have a classmate who has limited hand mobility — this could be really useful for him. I'll send him the link.

INTERVIEWER

On a scale of 1 to 10, how memorable was the ad?

MEI LIN TAN

Maybe a 6? The colour was very memorable but I didn't fully understand what they were selling until you explained it. The headline is clever but maybe too subtle for a billboard.

AI ANALYSIS · KEY TAKEAWAY

Mei Lin had moderate recall and correctly identified the brand name but was uncertain about the product category. The yellow colour was the primary recall anchor. She showed interest once the product was explained but did not self-identify as the target user, suggesting the creative needs a stronger audience signal for non-specialist viewers.

Recommendation

RECOMMENDED PLACEMENT

one-north MRT Station Domination

83

SIGHTLINE SCORE

Based on simulation data, agent captures, audience analysis, and user interviews, we recommend leading the Fluent OOH campaign with the one-north MRT Station Domination as the primary brand-building placement, targeting the tech and research professional demographic that maps most directly to the product's early adopter profile. The Orchard MRT Digital Billboard should run concurrently as a high-reach awareness driver. Both placements should carry a QR code linking directly to the waitlist. The Bugis Junction placement should be activated in Q3 if waitlist conversion data supports broader audience targeting.

Next Actions

1. Confirm one-north Station Domination availability for July – September with SMRT Trains Media.
2. Add QR code linking to getfluent.tech/waitlist to both primary creatives.
3. Insert a one-line product descriptor beneath the headline to clarify the disability-tech category for non-specialist audiences.
4. Brief creative team on a testimonial panel variant for the one-north black wall panels.
5. Set up UTM tracking on the waitlist URL to attribute signups to each OOH placement.
6. Schedule a 30-day post-launch recall study to validate simulation predictions.
